MetaCAM

“The impact we were expecting to see has already been far exceeded. We have clear gains in material utilisation, which is leading to a higher rate of throughput and more importantly our front end process can now be flexible with nesting dynamically based on the day’s requirements whilst utilising the assembly kitting which has given us a function to control multi part assemblies through the nesting module.”

Enterprise

“We are already seeing a lot of benefits with using the new system from clarity of information to the modules for revision control. Additionally, the interface with seen by machine operators is very user friendly, easy for them to re-arrange production as needed, and reduces our paper printing requirements.

Now that our business has expanded we have office functions based in a new unit next to the existing factory. Having Enterprise has helped break down the distance and communication barriers as the machine operators receive real-time, graphical updates as programs are issued from the office.

FEEDBACK

Summary

“Metamation Software has saved us many hours in manual processing and given us new levels of flexibility and control of our machines we were unable to achieve prior to installing.”

- Troy Barratt, MD CEL.
